M protein precursor - Streptococcus pyogenes (serotype M19) (fragment)
C; Species: Streptococcus pyogenes
A; Variety: serotype M19
C; Date: 15 Feb-1996 #sequence_revision 19-Apr-1996 #text_change 16-Feb-1997
C; Accession: 561079; $60799
R; Whatmore, A.; Kapur, V.; Sullivan, D.; Musser, J.; Kehoe, M.
C; Accession: S61079
C; Accession: S61072
A; Description: Noncongruent relationships between variation in emml gene sequences and the A; Reference number: $61072
A; Accession: S61079
A; Molecule type: DNA
A; Residues: 1-98 <AHAA
A; Coss.references: EMBL: U11959

-!- FUNCTION: Carrier of the growing fatty acid chain in fatty acid biosynthesis.

-!- FUNCTION: Carrier of the growing fatty acid chain in fatty acid biosynthesis.

-!- PARHWAY: De novo fatty acid biosynthesis.

-!- PATHWAY: De novo fatty acid biosynthesis.

-!- PTM: 4'-phosphopantetheine is, transferred from CoA to a specific serine of apo-ACP by acpS. This modification is essential for activity because fatty acids are bound in thioester linkage to the sulfhydryl of the prosthetic group (By similarity).

-!- SIMILARITY: CONTAINS I ACYL CARRIER DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tettelin H., Nelson K.E., Paulsen J.T., Eisen J.A., Read T.D., Peterson S., Heidelberg J., DeBoy R.T., Haft D.H., Dodson R.J., Deboyn R.T., Haft D.H., Dodson R.J., Canin M., Rolonay J.F., Nelson W.C., Peterson J.D., Umayam L.A., White O., Salzberg S.L., Lewis M.R., Radune D., Holtzapple E., Khouri H., Wolf A.M., Utterback T.R., Hansen C.L., McDonald L.A., Feldblyum T.V., Angiuoli S., Dickinson T., Hickey E.K. It can also cleave other RNA substrates such as 4.55 RNA. The protein component plays an auxiliary but essential role in vivo by binding to the 5'-leader sequence and broadening the substrate specificity
SUBUNIT: Consists of a catalytic RNA component (M1 or rnpB) and a
                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
of the ribozyme (By similarity).
-!- CATALYTIC ACTIVITY: Endonucleolytic cleavage of RNA, removing 5'-
extra-nucleotide from tRNA precursor.
-!- SUBUNIT: Consists of a catalytic RNA component (MI or rnpB) and a
protein subunit (By similarity).
-!- SIMILARITY: BELONGS TO THE RNPA FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Complete genome sequence of the model actinomycete Streptomyces coelicolor A3(2).";
Nature 417:141-147(2002).
-!- FUNCTION: Hydrolyzes D-tyrosyl-tRNA(Tyr) into D-tyrosine and free tRNA(Tyr). Could be a defense mechanism against a harmful effect of D-tyrosine (By similarity).
-!- SUBCELDULAR LOCATION: Cytoplasmic (Probable).
-!- SUBCELDULAR LOCATION: Cytoplasmic (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

-!- FUNCTION: THIS IS A LARVAL (TADPOLE) ALPHA-GLOBIN.
-!- SUBUNIT: Heteroretramer of two alpha chains and two beta chains.
-!- TISSUE SPECIFICITY: Red blood cells.
-!- SIMILARITY: BELONGS TO THE GLOBIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-AUG-1988 (Rel. 08, Last sequence update)

Natl. Acad. Si. U.S.A. 98:4136-4141(2001).
-!- FUNCTION: This enzyme is involved in nucleotide metabolism: it produces dOMP, the immediate Precursor of thymidine nucleotides and it decreases the intracellular concentration of dUTP so that uracil cannot be incorporated into DNA (By similarity).
-!- CATALYTIC ACTIVITY: dUTP + H(2)0 = dUMP + diphosphate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Niezman W.C., Feldblyum T.V., Laub M.T., Paulsen I.T., Nelson K.E., Eisen J., Heidelberg J.F., Alley W.R.K., Ohta N., Maddock J.R., Dedocka I., Nelson W.C., Newton A., Stephens C., Phadke N.D., Ely B., Deboy R.T., Dodson W.J., Durkin A.S., Gwinn M.L., Haft D.H., Kolonay J.F., Smit J., Craven M.B., Khouri H., Shetty J., Berry K., Utterback T., Tran K., Wolf A., vamathevan J., Ermolaeva M., White O.
